Dear Senator Bradley:

In writing to you about the problem of thorium being stored in Maywood, I feel this problem is a health risk to the community that I live in.

The radioactive thorium piles cause many sicknesses including cancer and also pollutes the air and water from which I must drink and breathe.

I feel that this problem is something that can be controlled by the government by simply moving it to a less populated area. If the community was more aware of the risk involved with radioactive thorium piles then perhaps the proper actions can be made to solve this problem.

Sincerely,
Kelly Krenn
